

ACTIVATE YOUR CROP'S DEFENSES

In recent weeks, crop yields and quality have been threatened by cold, wet weather conditions. Help your crops recover by optimizing their own natural health defenses with foliar nutritionals from Helena.

Excessive rain causes crops to experience a lack of oxygen, which leads to reduced respiration, energy shortage and potential cell death. **Megafol®** is specially formulated to help crops maintain high-energy growth even in unfavorable conditions. It helps crops recover from flooding or water stress faster by targeting specific genes that control plant processes to help crops use their own energy more efficiently.

To restore crop nutrition to optimum levels, pair Megafol with **ENC® Flex** for a complete balance of essential NPK and micronutrients. ENC Flex supports plant growth by enhancing uptake of these key nutrients for a faster crop response even under adverse conditions.

Together, Megafol and ENC activate your crop's defenses with strength and nutrition. Contact your local Helena representative or authorized dealer for more information.

MEGAFOL

PRODUCT HIGHLIGHTS

- Strengthens crop vitality
- Improved crop response to growing stress
- Contains nitrogen & potassium in highly soluble & mobile forms
- Contains precision blend of plant extracts
- Can be tank-mixed with other inputs such as herbicides, fungicides, insecticides & Coron®
- Supplements normal fertility program
- Improves plant health

PRODUCT HIGHLIGHTS

- Balanced foliar nutrition
- Ammonia-free formulation
- Chelated micronutrients for quick absorption
- Quick crop response, particularly under stressful conditions
- Compatible with most pesticides, including new over-the-top herbicides
- Excellent crop/plant safety
