

## THE POWERFUL COMBINATION YOU'VE BEEN LOOKING FOR

**Ele-Max Sulfur LC** is the only liquid foliar sulfur blend with the nutrition and absorption properties of **ENC Formulation Technology**. As part of the Ele-Max line of high-quality micronutrients and foliar nutritional blends, Ele-Max Sulfur LC is designed with superior crop safety and is beneficial in both early and late growth stages.

Sulfur is an essential nutrient for crop production. With the higher-yielding varieties growers plant today, sulfur is removed from the soil at greater rates, creating soil deficiencies if not replaced. Ele-Max Sulfur LC provides sulfur in the sulfate form to help manage in-season deficiencies.

With ENC Formulation Technology, Ele-Max Sulfur LC provides balanced foliar nutrition and quick plant uptake. The formulation also contains a blend of 10-5-0 NPK, 10% sulfur and .04% boron.

Look no further for a high-analysis foliar sulfur blend with superior crop safety. Contact your local Helena representative or authorized dealer for more information on Ele-Max Sulfur LC.

### PRODUCT HIGHLIGHTS

---

- **Superior crop safety**
- **Beneficial for both early & late growth stages**
- **Provides sulfur in the most plant-available form**
- **Low use rate**
- **Contains ENC Formulation Technology:**
  - Enhances nutrient uptake to help correct plant nutrient deficiencies
  - Stronger, more productive plant with higher yield potential
  - Enhances tank mix compatibility
