

TURN UP THE HEAT FOR GREATER RESULTS AT BURNDOWN

Eliminating hard-to-control weeds at burndown is easier with **Fire-Zone**® in your tank. Fire-Zone is a highly effective blend of methylated seed oils (MSO) and surfactants designed to optimize burndown, desiccation and industrial weed control applications.

Fire-Zone provides a faster weed-killing response that outperforms standard MSOs. It works well in adverse weather conditions, and it is compatible with multiple herbicides, including glyphosate. Fire-Zone should not be used in over-the-top weed control applications in a growing crop.

Adding Fire-Zone to burndown applications achieves faster, more complete weed control. Contact your local Helena representative of authorized dealer for more information.

PRODUCT HIGHLIGHTS

- **Optimized for use in burndown & desiccation applications**
- **Outperforms standard MSOs**
- **Disperses well in cold water**
- **Flexible application – ground, air, CDA**
- **Compatible with multiple herbicides**
- **WARNING: DO NOT USE IN OVER-THE-TOP APPLICATIONS**
