

INCREASED FERTILIZER EFFICIENCY

Hydra-Hume® 0-0-1 is a fertilizer efficiency tool designed to help you get more from the valuable fertilizer you apply. It is a 12% liquid organic acid product containing both humic and fulvic components.

Hydra-Hume 0-0-1 increases fertilizer uptake and helps retain nitrogen and phosphorus in the soil for greater utilization and less leaching. It helps prevent nutrient tie-up by improving nutrient availability, while improving soil structure and aggregation to allow for better water movement.

Contact your local Helena representative or authorized dealer for more information on Hydra-Hume 0-0-1.

PRODUCT HIGHLIGHTS

- Increases fertilizer efficiency
- Improves nutrient uptake
- Enhances soil structure & biology
- Improves agronomic conditions for stronger plant & root growth
- Helps prevent nutrient tie-up
- Increases nitrogen uptake by crops
